# Why Choose Simplex System Controls?

## Accurate Quoting Reduces Hidden Costs

While our competitors may quote the initial design, they often ignore the most important question... **Will the design work as is, or will they hit you with additional costs later?**

At Simplex System Controls, our experts can spot issues BEFORE the quote is issued, ensuring it is as accurate and transparent as possible. Our quote includes all items necessary for the panel to function properly, saving you production delays and hidden costs.

## Personal Project Manager

**Your time is valuable.** From the moment your order is placed, one of our project managers will be devoted to meeting your needs quickly and easily through a single point of contact.

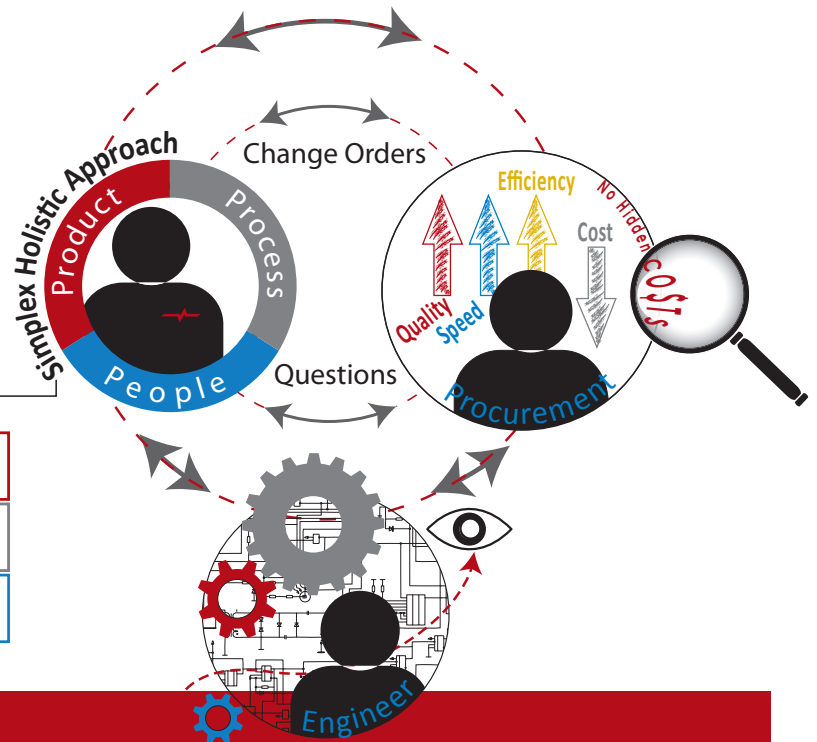

<b>Product - We start with the end in mind</b>
<b>Process - Ease of Doing Business</b>
<b>People - The right people for the job</b>

## Superior Quality Control Keeps Your Project On Schedule and On Budget

**Keeping your project on schedule and on budget is important!** We check the control panel at every stage of production so you can be confident that its hardware will commission cleanly in the field. This means no lost production time, no delayed ROI, no fines, and no additional time or money spent on repairs.

## Open Door Policy

Taking care of your company is our top priority. We understand that you often have to play middle-man between your engineer and the company from which you are requesting a quote. At Simplex, we are happy to handle design questions directly with your engineer to complete your quote as quickly and accurately as possible. If you or your engineer would like to learn more, feel free to contact us or drop in. Our door is always open.
