Why Choose Simplex System Controls?

Accurate Quoting Reduces Hidden Costs

While our competitors may quote the initial design, they often ignore the most important question... **Will the design work as is, or will they hit you with additional costs later?**

At Simplex System Controls, our experts can spot issues BEFORE the quote, ensuring it is as accurate and transparent as possible. Our line-by-line quote includes all items necessary for the panel to function properly, saving you production delays and hidden costs.

Personal Project Manager

We understand that engineers are overworked. At Simplex System Controls, giving you the best possible experience is our top priority. From the moment your order is placed, one of our project managers will be devoted to meeting your needs quickly and easily through a single point of contact. **We can even start your build as final details are still being decided.**

Superior Quality Control Keeps Your Project On Schedule and On Budget

Keeping your project on schedule and on budget is important!

We check the control panel at every stage of production so you can be confident that it will commission cleanly in the field. This means no lost production time, no delayed ROI, no fines, no additional time or money spent on repairs, and no interruption to your current work flow.

Factory Acceptance Test (FAT)

Your time is valuable. While factory acceptance tests are a routine part of the job, most engineers find they cut into an already hectic schedule. At Simplex, we are proud to say that engineers who perform a FAT are often so pleased that they choose not to conduct FATs for future projects.

Open Door Policy

If you would like to learn more about submitting a request for quote, would like to perform a factory acceptance test, or would like to learn more about Simplex, please feel free to contact us or drop in. Our door is always open!
